# Class Summary

## AI Challenge · Sessions 5 & 6 Summary

Local AI, advanced prompting, loop workflows, multimodal generation, and landing-page production

### ★ WHY THESE SESSIONS MATTER

-  Students moved from basic prompting to controlled AI workflows for real business use.
-  The class connected privacy, cost, accuracy, and workflow design to enterprise AI decisions.
-  Students combined text, image, video, audio, and publishing tools into one marketing workflow.

### 2 SESSION 5 · LOCAL AI & ADVANCED PROMPTING

#### A

##### Ollama & local AI

Runs on your own computer, can work offline, and is useful for privacy-sensitive tasks.

#### B

##### Cloud AI vs local AI

Companies often balance cloud convenience with local privacy and lower cost.

#### C

##### Edge AI future

More AI will move from servers to laptops, phones, wearables, and network edge systems.

#### D

##### Prompt anatomy

1. Persona / Role
2. Task
3. Context
4. Example
5. Format
6. Tone

#### E

##### Guardrails for thinking models

Tell the AI what must be accurate, especially dates, names, figures, and deterministic facts.

#### F

##### Reduce hallucinations

Add instructions like:

- "Interview me if information is missing."
- "If you do not know, say you do not know."

#### G

##### XML prompting

XML-like structure helps AI identify prompt sections clearly in company workflows.

#### LOOP PROMPTING

1 Discover → 2 Plan → 3 Execute → 4 Verify → 5 Iterate

The AI can work in a loop for thinking or agentic tasks, but verification criteria are the hardest and most important part.

### CLASS EXERCISES IN SESSION 5

#### Ollama test

Install and run Ollama locally.

#### DeepSeek structured prompt exercise

Practice building structured prompts.

#### ChatGPT XML master prompt

Create an XML-style master prompt.

#### Loop prompt to criticize group ideas

Use loop prompting to review and improve team ideas.

### 3 SESSION 6 · MULTIMODAL CAMPAIGN WORKFLOW

#### A

##### Campaign challenge

Build a Pepsi landing page using AI-generated media.

#### B

##### Reference image first

Create a strong starting image before generating video.

#### C

##### Storyboard

Turn the scene prompt into a storyboard to guide video generation.

#### D

##### Video generation

Test tools such as Gemini, Meta AI, and Hugging Face video spaces; compare results across platforms.

#### E

##### Landing page build

Use Lovable to create a landing page with a background hero video.

#### F

##### Audio / jingle

Use Suno to generate music that fits the campaign mood.

#### G

##### Publish & submit

Publish the page, get the live link, and submit it in Blackboard.

#### H

##### Prepare for next class

Install Codex in advance so the next session can start smoothly.

#### FROM PROMPT TO LIVE PAGE

#### TOOLS USED

 Ollama

 DeepSeek

 ChatGPT

 Gemini

 Meta AI

 Hugging Face

 Suno

 Lovable

 Codex

### ★ BIG TAKEAWAYS

Local AI matters for privacy, offline use, and cost control.

Prompting is not just asking—it is structuring and controlling a process.

Thinking and agentic workflows need guardrails and verification.

Multimodal work improves when image and storyboard references are strong.

Real AI projects combine creation, orchestration, and deployment.

Classroom Wi-Fi constraints reinforced the importance of preparation, local tools, and installation before class.
